一、机器简介 1.INTRODUCTION

该系列平缝机是一种单直针双线锁式线迹的工业用缝纫机。适用于缝制薄的和中等厚度的针、棉、毛以及化纤等织品及轻质皮革制品。该机结构合理，主要零部件均采用高级合金钢制成，因此能保证机器运转平稳、噪音小、使用方便、经久耐用。该机外形美观大方，其中自动加油平缝机还设有自动润滑系统，并装有油量控制阀，是服装、鞋帽行业的理想缝纫设备。

This series flat bed industrial sewing machine is single straight needle, double thread lockstitcher, which is suitable for sewing thin and medium thickness knitting, cotton, wool, chemical fiber and light leather and etc. Products. The structure of this machine is reasonable, all of the main parts are made by high quality alloy steel. The features of it are as follows: steady running, lower noise, easy to operate, durable, beautiful appearance. The automatic oil flat bed sewing machine has automatic of garments lubrication system, and oil flow regulating valve, it is the ideal sewing equipment trades.

二、主要技术规格: 2.MAIN TECHNICAL SPECIFICATIONS

		中 厚 料	厚 料
1	最高缝纫速度	3000针/分钟	2000针/分钟
2	最大线迹距	4毫米	8毫米
3	压脚提升高度	6毫米 (膝提可达10毫米)	6毫米 (膝提可达10毫米)
4	能缝最大厚度	5毫米	8毫米 (自由状态)
5	使用机针	DB×1 14号	DP×5 21号
6	润滑油	油号: 10号白油	
7	电机功率	380V/370W	

		For Light medium materials	For heavy materials
1	Max. sewing speed	3000 s.p.m	2000 s.p.m
2	Max. needle length	4mm	8mm
3	Presser lifting amount	6mm (10mm by knee lifting)	6mm (10mm by knee lifting)
4	Sewing ability of max. thickness	5mm	8mm (free state)
5	Needle	DB×1 14#	DP×5 21#
6	Lubricating oil	*10 white oil	
7	Power of electric machine	380V/370W	

三、机器安装和操作准备:

3.INSTALLATION OF MACHINE AND OPERATION PREPARATION

1. 机器安装

(1) 安装地点:

为使机器在高速运转时平稳、振动小，安装必须有一个坚固而平坦的基础，如果机架脚四只胶垫和地面之间有较好的接触，就能使机架更加稳固，运转时的噪音也会降低。

(2) 油盘的安装:

将两只油盘支座 1 和两只油盘座垫 3 分别装在台板凹槽的四角，用油盘座钉 2 固定之，再装上油盘4。 (图1、2)

(3) 机头的安装:

将机头连接钩 1 插入机壳底板孔内，与台板上的机头连接钩座 2 相嵌合，再将机头放到四只角的机头座垫 3 上。 (图3、4)

1. Installation of machine:

(1) Place of installation:

The machine should be installed on a strong base to ensure the machine to have a steady running and minimum vibration at high speed. If the four rubber mats on the feet of the sewing machine stand have a good connection with ground, it results in lower noise in operation.

(2) Fitting oil pan:

Put the oil rubber cushions(1) and oil pan felt cushions (3) separately on four corners of notch of the table, fix them with the screw of oil pan (2), then install the oil pan (4). (Fig. 1, 2)

(3) Fitting machine head:

Put the machine head connecting hooks (1) into the bed holes to engage respectively two hinges (2) stated in the table, than place the machine on the four cushions (3). (Fig. 3, 4)

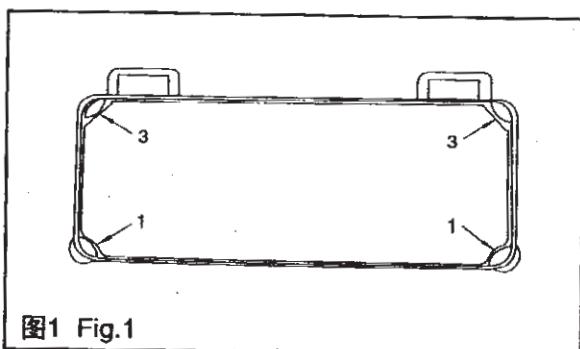

图1 Fig.1

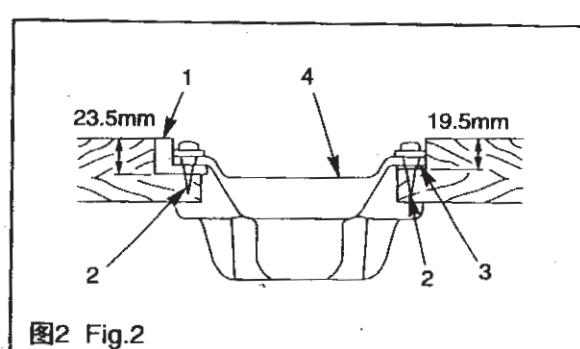

图2 Fig.2

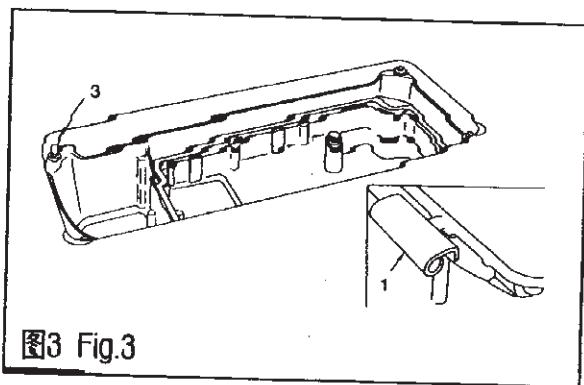

图3 Fig.3

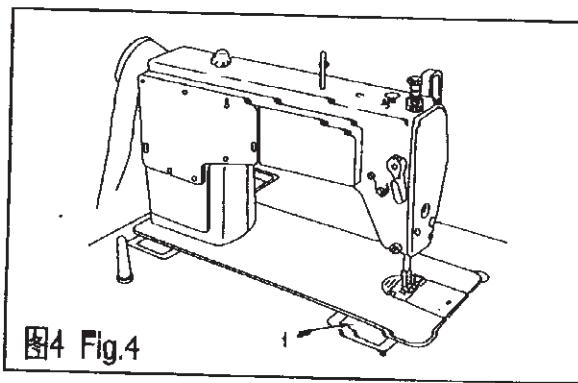

图4 Fig.4

(4) 绕线器的安装:

安装好机头，套上皮带后就可以着手装绕线器。安装绕线器时应将绕线器 5(见图5)对准皮带的外边，并使绕线轮和皮带之间有一定的空隙。但在揿下绕线轮架时应能使绕线轮和皮带相互接触，上轮转动时，皮带能带动绕线轮一起转动。然后拧紧木螺钉将绕线器固定在台板上。

(4) Fitting thread winder:

After fitting machine head and the belt, the thread winder can be fitted. In (Fig. 5) when fitting winder, the winder wheel 1 should face the outside of belt 2. Between winder wheel and belt should have a certain clearance. If push down winder wheel stand 3, the winder wheel should touch the belt. And when balance wheel running, the belt can make the winder wheel run together, then tighten screw 4 to set the thread winder on the table.

(5) 皮带罩和绕器的安装(图5)

(5) Installing the belt cover and bobbin winder (Fig.5)

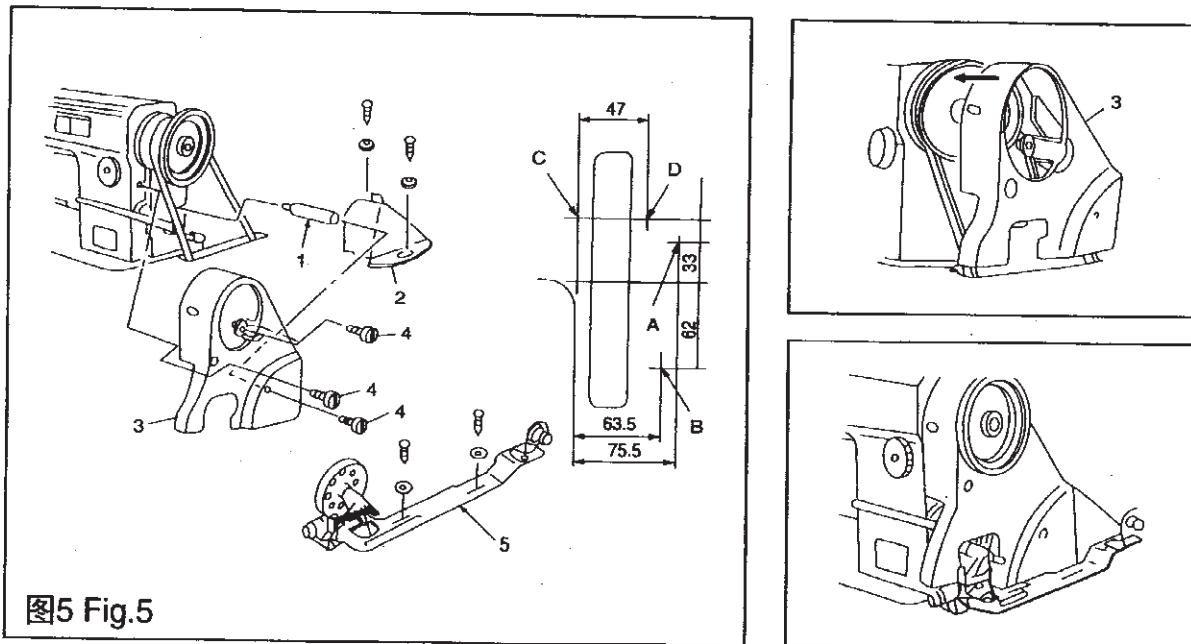

图5 Fig.5

安装程序

- 1) 在台板上引四只木螺钉导孔A、B、C、D。
- 2) 将罩壳支柱①装入机壳螺孔内。
- 3) 将上轮前罩壳③从后斜方装入，使上轮套进上轮前罩壳③的孔内。
- 4) 将上轮后罩壳②放置在导孔C、D上。
- 5) 用螺钉④将上轮前罩壳③固定在机壳上，此时的螺钉紧固扭矩，请控制为30kgfcm，即使紧固扭矩超过以上程度，也无效果。
- 6) 将上轮后罩壳②向后方移动，在上轮后罩壳②的橡胶部分碰到上轮前罩壳③时，再移动0.5~1mm，将其用木螺钉与垫圈固定。
- 7) 将木螺钉和垫圈把绕线器⑤固定在导孔A和B上。

Installation Procedure:

- 1) Drill four holes A, B, C, D, in the machine table for screws.
- 2) Insert support ① in the threaded hole in the housing.
- 3) Install the front belt cover ③ and get the hand wheel in the middle of the cover hole.
- 4) Install the back belt cover ② at holes C, D.
- 5) Fix the front belt cover ③ on the support with screws ④, The tightening torque for the screw ④ is about 30kgf.cm.
- 6) Move the back belt cover ② backward, until its rubber touches the front belt cover ③ , move it again for 0.5-1mm and fix it with screws and washers.
- 7) Fix bobbin winder ⑤ hole A, B with screws.

(6) 机架安装示意图: (图6)

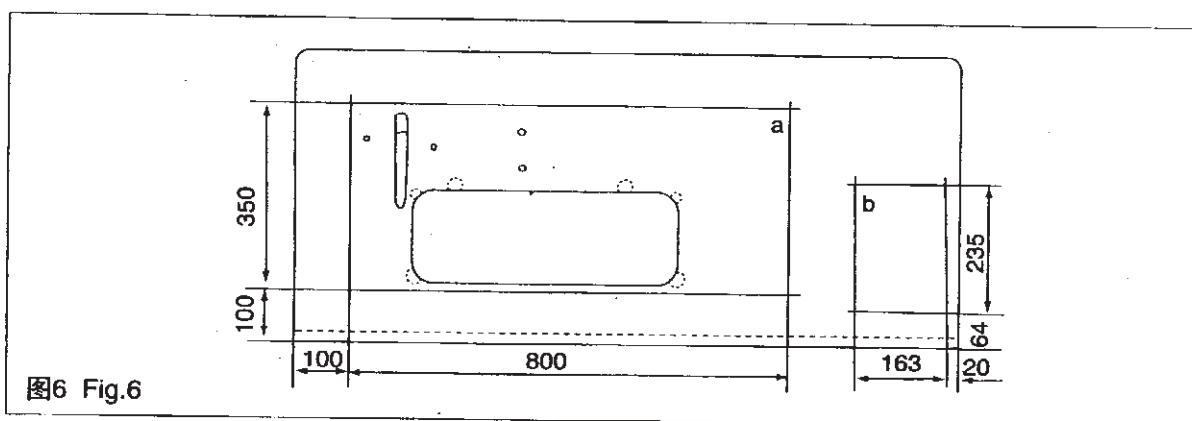

a. 机架安装位置。

B. 抽屉安装位置。

(6) Sketch map of machine stand installation: (Fig.6)

a. Position of machine stand.

b. Position of drawer.

2. Operation preparation:

(1) Cleaning:

Before packing each part of the machine, should be covered with anti-rust grease. And before operation new machine, anti-rust grease on each part of machine should be cleaned out with gasoline and clean with soft cloth.

(2) Inspection:

Some parts of machine head may get loose due to vibration incurred in transit or rough handling, so after cleaning, the machine should be thoroughly inspected. To check the machine head by means of turning balance wheel. The machine head must be regulated in the case of conditions such as abnormal noise from the compact of moving parts, the difficulty of the machine head to run, running into each other of moving parts.

(3) Lubrications:

a. Information for lubrication: (Fig. 7)

Before starting the machine, fill oil pan with sewing machine (2#white oil) up to HIGH mark A. When you operate the machine after lubricating, you will see splashing oil through oil sight window. Note that the amount the splashing oil is unrelated to the amount of the lubricating oil. But if the oil level is lower than LOW mark B, always refill the oil.

* Note: New machine (or those who have not been used for a long time) must be operated at a speed of 2000 s.p.m off and on for 10 minutes at first.

b. Adjusting the amount of oil supplied in the front of head (Fig. 8):

The amount of oil supplied in the oil reservoir in the front of head can be adjusted by regulating valve of amount of oil (1): turn the regulating valve of amount of oil (1), when dot A on the regulating valve is parallel to oil inlet tube(2), the amount of oil is maximum, when rotating the regulating valve, the amount of oil will be reduced gradually till the dot on the regulating valve is vertical to the oil inlet pipe, the oil flow regulator is closed.

c. In the same way, adjust the amount of oil supplied to the hook.

(4) Testing:

- a. When machine running, the balance wheel should be counter clockwise.
- b. The machine can not run without materials after threading.
- c. At the beginning of operating, the speed of machine can be over 2500spm. Only after one or two months of running, the speed of the machine can be increased as per nature of fabrics.

四、机器的操作

4.Operation

1. 缝线的选择:

面线应采用左旋线，底线则左、右旋线均可使用。缝线旋向的鉴别，可按(图9)所示把缝线捏住，以右手按图箭头方向搓转缝线，若线股越搓越紧，则是左旋线，反之即为右旋线。

1. Selection of sewing thread:

Needle thread should be left twisting. (Fig. 9)

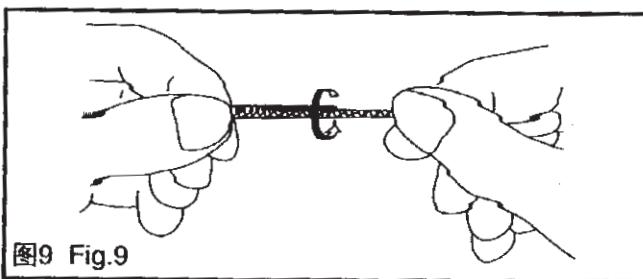

图9 Fig.9

2. 装置机针:

转动上轮，使针杆上升到最高位置，旋松支针螺钉1(图10)，注意机针的长槽应位于操作者的左面，然后把针柄插入针杆下部的针孔内，使其碰到针杆孔的底部为止，再旋转支针螺钉固定机针。

2. Fitting needle:

Turning balance wheel to make the needle bar in the highest position and loosen the screw 1 (Fig. 10). Long groove of needle should face the left of the operator, then insert the needle into the hole of the needle bar. Tighten the screw.

3. 穿面线和引底线:

穿面线的顺序表示在(图11)中。自线团来的面线，先穿入顶部的过线板1的右孔中，经过夹线板2，自左孔中引出，再经过三眼线钩3的三个线眼，向下套入夹线器4的夹线板之间，再勾进挑线簧5，绕过缓线调节钩6，向上勾进右线钩7，再穿过挑线杆8的线孔，然后向下勾进左线钩9、针杆套筒线钩10、针杆线钩11，最后将缝线自左向右穿过机针12的针孔内，并引出100毫米左右的线备用。

引底线时，先将面线捏住，转动上轮，使针杆向下运动，并回升到最高位置。然后拉起捏住的面线线头，底线即补牵引上来。最后把底、面二根线头，一起置于压脚下面。

3. Threading:

As per (Fig. 11), when threading needle thread, first put the thread through thread guide 1 and tension plate 2 and thread retainer 3, down through tensioner 4 and thread take up spring 5 and thread releasing hook 6, then up through right thread hook 7 and thread taking up level 8. Again down through left thread hook 9 and needle bar sleeve thread hook 10 and needle bar thread hook 11. Finally pull the thread needle hole 12 from left to right with thread tail 100mm.

When thrading bobbin thread, hold the needle thread while turning balance wheel to make the

needle bar move down and then to make it rise in the highest position. Then the bobbin thread is pulled out with the needle thread. Finally put the two threads under the presser foot.

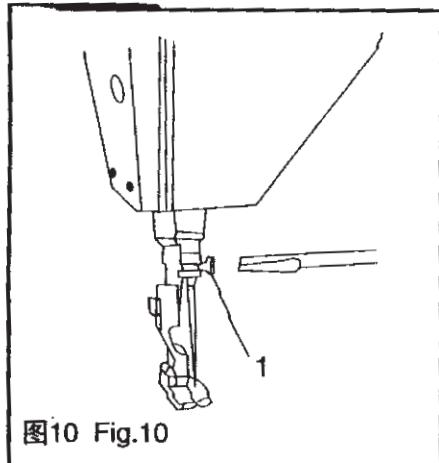

图10 Fig.10

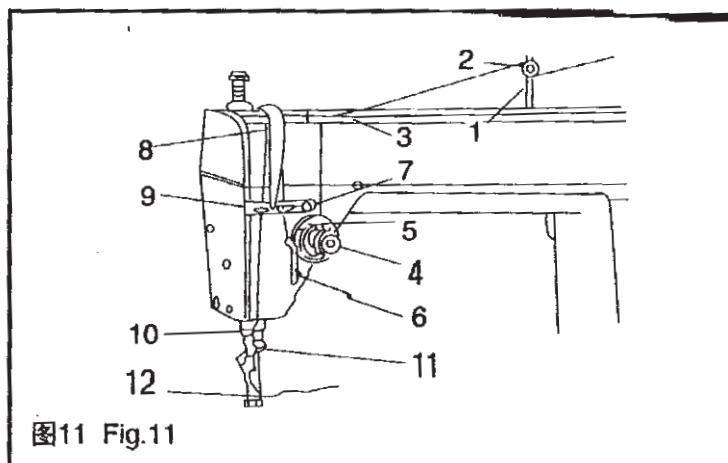

图11 Fig.11

4. 棱心的安装(图12)

- (1) 将棱心装入梭子内。
- (2) 将线从梭子上的线槽A中穿过，朝B方向拉出。这样，线通过夹线簧下从线孔B处引出。
- (3) 拉底线C时，棱心应按箭头方向转动。

4. SETTING THE BOBBIN INTO THE BOBBIN CASE (Fig.12)

- 1) Install the bobbin in the bobbin case so that the thread wound direction is counterclockwise.
- 2) Pass the thread through thread slit A, and pull the thread in direction B. By so doing, the thread will pass under the tension spring and come out from notch B.
- 3) Check that the bobbin rotates in the direction of the arrow when thread C is pulled.

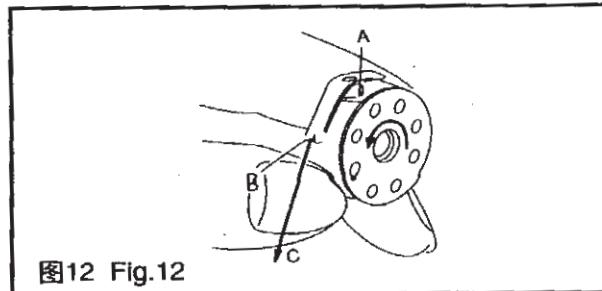

图12 Fig.12

5. 针距长短调节和倒顺送料控制:

针距的长度，可以用转动针距旋钮（图13）来调节。逆时针转动，针距调长。顺时针转动，针距调短。需要倒向送料时，可以将倒送板手向下掀压，即能进行倒送。手放松后，倒送板手能自动复位，这时又恢复顺向送料。

5. Regulating needle gauge and feeding:

Turning the rotary button can regulate the width of needle gauge (Fig. 13). If turning counter clockwise, the needle gauge is wide. If turning clockwise, the needle gauge is narrow. If it is

necessary to back tack, just put down the lever under the rotary button.

6. 缝线的张力:

缝线的张力要根据缝料的差别、缝线的粗细以及其他一些因素而变动。

实际使用中，是依据缝纫出来的线迹来调整底、面线的张力，使之能得到正常的线迹。

各种形状的线迹，表示在(图14)中。

(a) 正常线迹。底、面线交锁在缝料中部;

(b) 面线紧、底线松的线迹。缝线交锁部分在缝料的上面;

(c) 面线松、底线紧的线迹。缝线交锁部分在缝料的底面;

(d) 底、面线均松的线迹。缝线虽然交锁在缝料中部，但底、面线浮在缝料的表面上;

(e) 底、面线均紧的线迹。缝线虽然交锁在缝料中部，但底、面线很紧地嵌入缝料。

6. Tension of thread:

Tension of thread is changed as per sewing materials and thread size. In (Fig.14), there are various stitches which often appear.

a. Normal. Two thread lock in the middle of the material.

b. Needle thread tension is too high. Two threads lock on the surface of the material.

c. Needle thread tension is too low. Two threads lock under the material.

d. The two threads tension are both low. They are floating on the surface of the material.

e. The two threads tension are both high. They are locking tightly in the material.

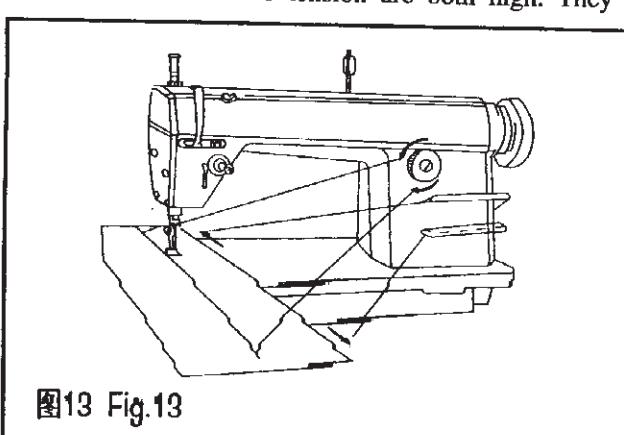

图13 Fig.13

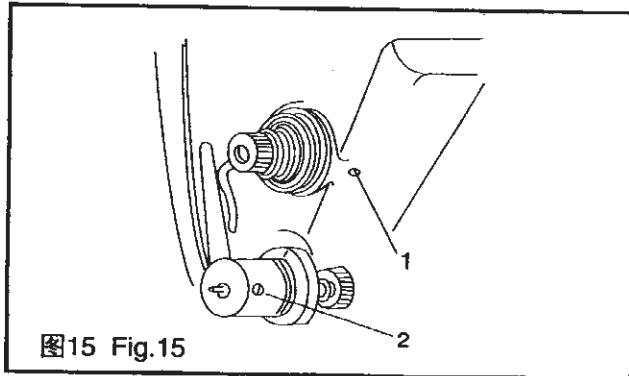

图15 Fig.15

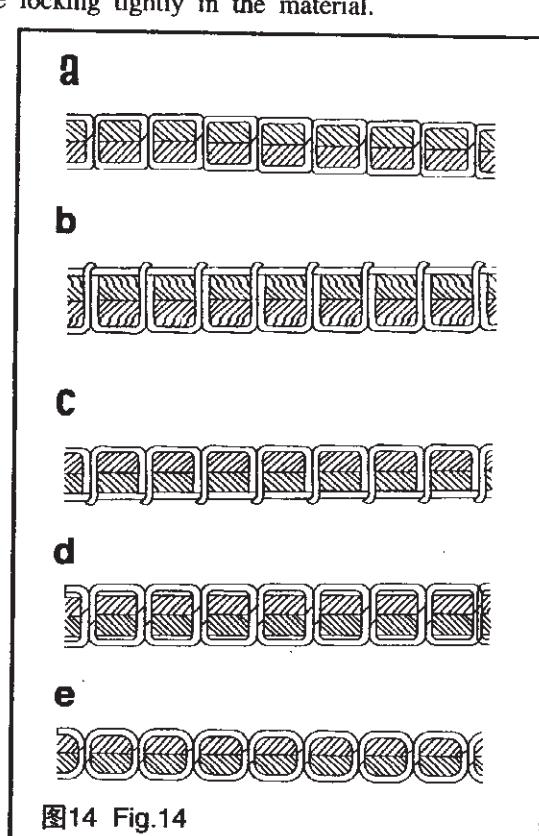

图14 Fig.14

(1) 挑线簧的调节:

挑线簧的张力，一般在20克左右。其摆动范围为7~10毫米。缝纫特别簿的缝料(短针距)，则要减弱挑线簧的张力和放宽其摆动范围。缝制特别厚的缝料则相反。

调节挑线簧的摆动范围时，可以先松开固定螺钉1(图15)，然后转动夹线器，以调节其摆动范围。夹线器顺时针转动，则摆动范围增大。反之则减少。最后再将固定螺钉支紧。同样，挑线簧的张力，也可以进行调节。调节时，先松开固定螺钉1，将夹线器整个取出，再松开固定螺钉2，这时，夹线螺钉就能转动。顺时针转动时，张力增加。反之则减少。调节好后，按同样方法，将夹线器装好。

通常，机器在出厂前，挑线簧均已调整妥善。因此，只是在缝纫特殊的缝料或使用特殊的缝线时，才需要重新进行调整。

(1) Regulating take-up spring:

In general, the tension of take-up spring is about 20g and the range of swinging is 7-10mm. When sewing special light material (narrow needle gauge), the tension should be reduced and the range should be broadened. Adversely for special heavy material.

When regulating the range of swinging, first loose the fixed screw 1 (Fig. 15), then turn the tensioner to regulate the range of swinging. If turn the tensioner clockwise, the range is broadened. If turn it anti-clockwise, the range is narrowed. Then tighten the screw. When adjusting the tension of take-up spring, first loosen set screw 1, and take out the tensioner. Then loosen set screw 2, so the tension screw can be turned. Turning clockwise can increase tension. Turning anti-clockwise can reduce tension.

Generally, the take-up spring has been adjusted before ex-factory.

(2) 底面线张力的调整:

缝纫物的线迹应该如图14 (a)。如果线迹不正时，应对底、面线的张力加以调整，使之能达到正常的线迹。

如果面线太紧，底线太松，则应逆时针旋转夹线螺母，以放松面线的压力，并用小螺丝刀旋紧梭皮螺钉，加大底线的压力(图16)

如果面线太松，底线太紧，则应顺时针旋转夹线螺母，以加大面线的压力，并用小螺丝刀旋紧梭皮螺钉，减小底线的压力(图17)

如出现图14 (d)、(e) 的线迹，也可以参照上述方法加以调整。

(2) Regulating thread tension:

The stitch on sewing material should be shown be Fig. 14a. If needle thread is too tight while bobbin thread is loose, the tension nut should be turned anti-clockwise to loosen the needle thread pressure and tighten the screw of bobbin spring to increase the bobbin thread pressure (Fig. 16). Adversely in previous case (Fig. 17)

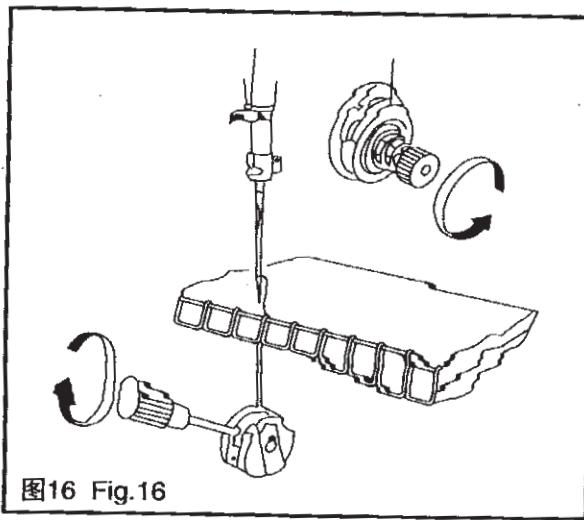

图16 Fig.16

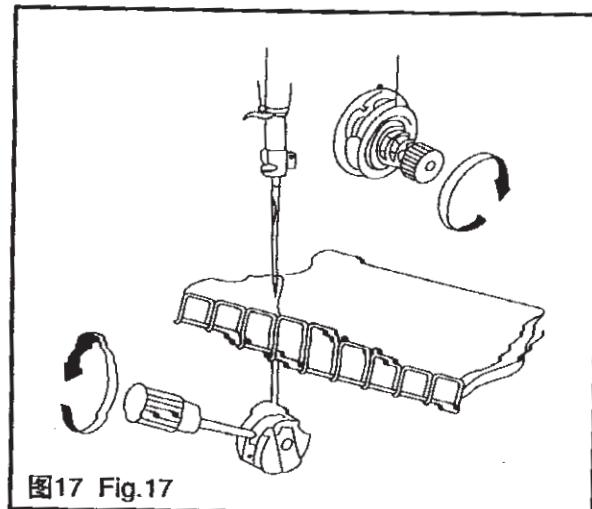

图17 Fig.17

7. 压脚压力的调节:

压脚的压力，要根据缝料的厚度加以调整。缝纫厚料时，应加大压脚的压力。这时，可以将机头顶部的调压螺钉，按(图18)(厚)所示箭头方向转动。反之，缝薄料时，可按(图18)(薄)所示的方向。转动调压螺钉，以减少压脚的压力。

压脚的压力，应以能正常推送缝料为度，宜尽量减轻一些。

7. Regulating pressure of presser:

Pressure of presser should be regulated as per sewing materials. When sewing heavy materials, the pressure should be increased. Just turn the screw on top of the machine head (Fig. 18) (Heavy). Adversely when sewing light materials (Fig. 18) (Light).

Pressure of presser should be properly regulated so that it can feed material without a hitch.

8. 线钩的调节:

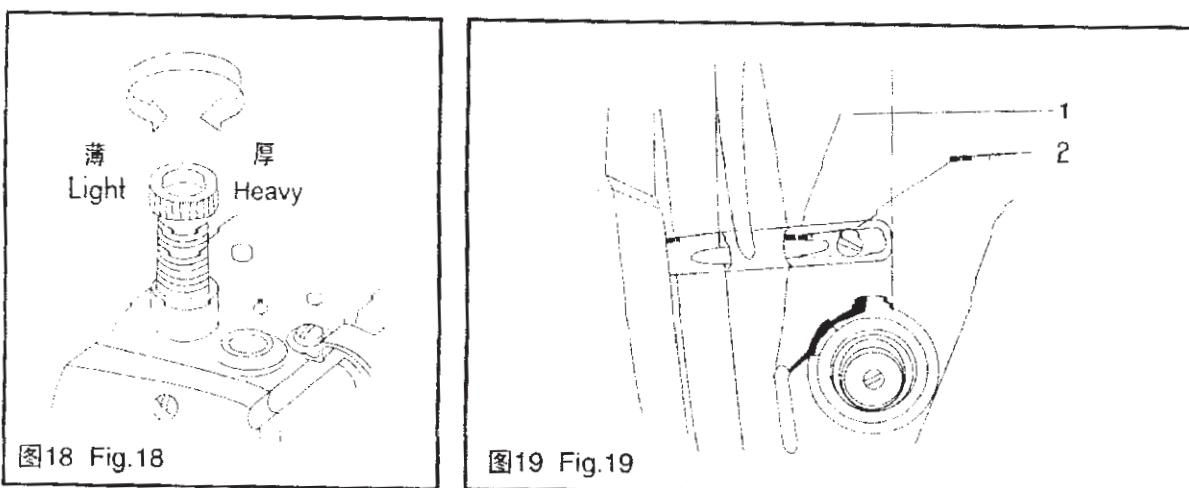

根据缝纫物的厚度和针距长度调节好线钩的位置后，将能使缝纫的线迹更为整齐。

在缝纫厚料时。松开螺钉2(图19)，将线钩1向左移动，以增加线量。在缝纫薄料时则往右移动线钩以减少线量。

8. Regulated thread hook:

In order to make the stitches moving beautifully, the position of thread hook should be regulated as per materials and the gauge of the needles.

When sewing heavy materials, first loosen the screw 2 (Fig. 19) and move the thread hook 1 to left to increase the thread amount. Adversely when sewing light materials.

五、机器的调整!

5. REGULATION OF MACHINE;

1. 旋梭勾线时间的调整:

旋梭和机针之间的相互运动关系，对缝纫性能的影响很大。标准的旋梭勾线时间是：

当机针向下运动到最低位置后再向上回升中厚料2.2毫米，厚料2.8毫米。

(1) 旋梭的勾线尖，应与机针的中心线一致；

(2) 在此位置时，勾线尖应高于机针孔上边2毫米（图 20）

调整的方法如下：

(1) 旋松旋梭的三个固定螺钉；

(2) 转动上轮，使机针下降到最低位置后上升中厚料2.2毫米，厚料2.8毫米；

(3) 转动旋梭，使勾线尖到达机针的中线处；

(4) 松开针杆连接轴紧固螺钉“1”（图 21）；

(5) 调整针杆的高度，使旋梭勾线尖高于机针孔上边2毫米；最后将全部紧固螺钉旋紧。

在调整旋梭的勾线时间时，还要注意到旋梭勾线尖与机针的侧面间隙。

旋梭勾线尖平面与机针缺口底部之间的距离，应调整到0.1毫米左右（图 22）。

1. Adjustment of looping time of rotary hook:

The moving relationship between rotary hook and needle will affect the functions of sewing

greatly. The standard rotary hook looping time of is:

After the needle moves down in the lowest position, it will rise to 2.2mm for medium material, and 2.8mm for heavy material, at this time:

- (1) Looping point of rotary hook should be in with the mid-line of needle;
- (2) Looping point should be 2mm higher than the hole of needle (Fig. 20)

Method of regulation:

- (1) Loosen the three set screw of rotary hook.
- (2) Turn balance wheel to lower than the needle in the lowest position and then raise it 2.2mm for medium material, and 2.8mm for heavy one.
- (3) Turn the rotary hook to make the looping point on the position of the midline of needle.
- (4) Loosen the set screw of needle bar link shaft (Fig. 21)
- (5) Regulate the height of needle bar to make the looping point 2mm higher than the hole of needle.

When regulating looping time of rotary hook, always be careful of the side clearance between looping time and needle.

The gap between the level of looping point and the bottom of needle should be regulated in 0.1 mm (Fig. 22)

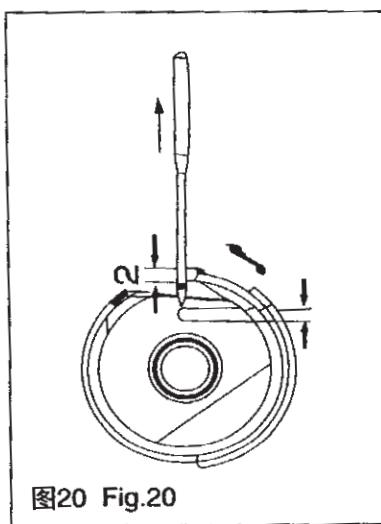

图20 Fig.20

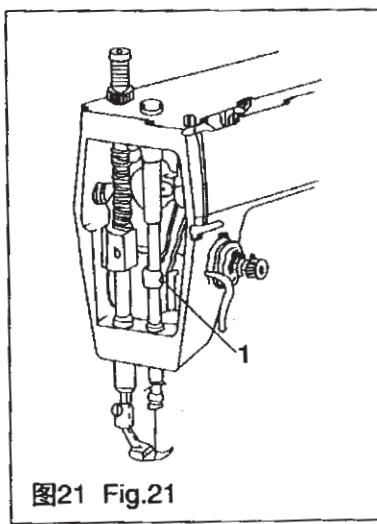

图21 Fig.21

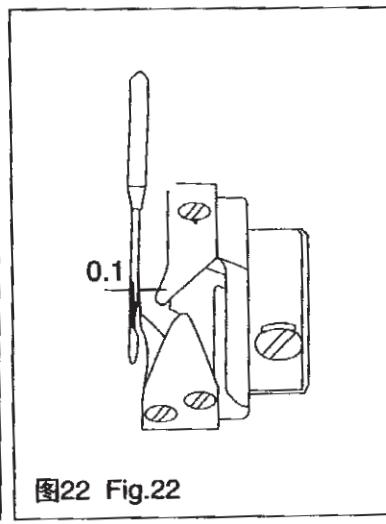

图22 Fig.22

2. 送布牙高度的调节:

送布牙上升到最高位置时，齿顶面一般应高于针板平面中厚料0.8~0.9毫米，厚料1.15~1.25毫米。如果缝纫特厚或特薄的缝料，则需调节送布牙的高度。调节时应先松开抬牙丝柄的紧固螺钉2(图23)，调节好后再把螺钉旋紧。

2. Regulating the lenght of feed dogs

The top of feed dogs should be 0.8~0.9mm for medium material, and 1.05~1.25mm for heavy material higher than the level of needle plate when the feed dogs rise in the highest position. If sewing special heavy or light materials, the gauge of feed dogs should be regulated. When adjusting, first loosen the fixed screw 2 (Fig. 23) of lifting belt crank.
