ARTISAN® 4110 Flat Bed and 4618 Post Bed

series machines are some of most highly sought out Gear Driven, Roller Feed sewing machines for decorative top stitching. A main feature of these two models include a special positively gear driven top roller feed wheel and walking needle (needle feed), with a positively gear driven lower roller feed wheel mechanism guaranteeing extremely accurate and equal-distant stitches. Both models are primarily designed to stitch the highest quality construction and decorative stitching of boot tops, shoes and specialty leather products. Driven roller feed models are most popularly used for fancy complex decorative top stitching of Custom Cowboy Boot tops and uppers. A major benefit of both of these two machines is that they allow you to sew very short equal-distant stitch lengths from about 20 stitches in an inch, and adjustable in length to long stitches of 5 stitches in an inch. One can easily see your stitch line and follow a complicated or simple pattern, row after row. High quality looking stitches with easily controllable speed is another key feature of the 4110 flat bed and the 4618 post bed machines from ARTISAN®.

Both machines use the same standard size "G" style bobbin with a horizontal rotating hook assembly, and both of the two machines use interchangeable, standard fittings and attachments which are readily available.

ARTISAN® recommends using quality sewing threads available in sizes from very light weight, small diameter, size z-15 up to a, z-138 medium heavy thread diameter. For the absolute best look and performance, we highly recommend using only leather point, genuine "Schmetz" brand quality German made needles in system 138 x 8. Available in a small diameter size #9 (NM 65) up to a medium heavy size #18 (NM 110) for larger diameter threads and heavier weight leathers. In sewing leathers, the proper size needle and quality thread in the correct size is the key to the best looking stitches.

Produce higher quality products with an ARTISAN®.

All 4618 and 4110 series gear driven roller feed stitchers include our electronic servo motor drive units with our newest generation, ACF-624 speed controllable, 800 watt output, ARTISAN® energy saving electronic AC servo motors, an American manufactured heavy duty plywood core laminated table top, Adjustable height "T" style steel legs with locking caster wheels, an ADR-124 LED gooseneck lamp, a spool of "Premium Performance" Leather Stitching Thread, Extra Schmetz Needles and Bobbins, a Tool Kit, an Operators and Spare Parts Manual, a Thread Nipper, and our customized additional accessories are also included.

Give ARTISAN® a call and find out more about how to improve your stitching, reduce your fatigue, and increase your confidence in the look and feel of all of your projects with a new ARTISAN® 4110 or 4618 stitcher.
